Patent No. 6165721

GENERAL INPORMATION:

APPLICANT: Rostkowski, Christine

APPLICANT: McMillian, Ray

APPLICANT: Hellyer. Tobin

TITLE OF INVENTION: Amplification and Detection of Salmonella spp.

FILE REFRENCE: Amplif. and Detection of Salmonella spp.

CURRENT APPLICATION NUMBER: US/09/289,380

CURRENT FILING DATE: 1999-04-12

NUMBER OF SEQ ID NOS: 17

SEQ ID NO 10

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Patent No. 6214588
Patent No. 6214588
GENERAL INFORMATION:
APPLICANT: Young, Richard A.
APPLICANT: Thompson, Craig M.
APPLICANT: Thompson, Craig M.
APPLICANT: Chao, David M.
TITLE OF INVENTION: No. 6214588el Factors Which Modify Gene TITLE OF INVENTION: Transcription and Methods of Use Therefor NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 20;

Sequence 56, Application US/09232346

Patent No. 6352830

GARBERAL INFORMATION:

APPLICANT: No. 6352830throp, Jeffrey P.

APPLICANT: APPLICANT: No. 6352830throp, Jeffrey P.

TITLE OF INVENTION: NETHONS FOR IMMUNOSUPRESSIVE AGENTS

FILE REFERENCE: APV-008.04

CURRENT APPLICATION NUMBER: US/09/232,346

CURRENT FILING DATE: 1999-01-15

PRIOR FILING DATE: 1994-04-18

PRIOR FILING DATE: 1994-04-18

PRIOR PELING DATE: 1991-08-22

PRIOR APPLICATION NUMBER: 08/260,174

PRIOR PELING DATE: 1991-08-23

PRIOR FILING DATE: 1991-08-23

PRIOR FILING DATE: 1994-06-13

PRIOR FILING DATE: 1994-06-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 151
US-09-629-645A-62
Squence 62, Application US/09629645A
Patent No. 6365354
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
TITLE OF INVENTION: ANTISENSE MODULATION OF LYSOPHOSPHOLIPASE I EXPRESSION
FILE REFERENCE: RTS-0137
CURRENT APPLICATION NUMBER: US/09/629,645A
CURRENT FILING DATE: 2000-07-31
NUMBER OF SEQ ID NOS: 164

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a
                                                                                                                                                                       Sequence 7.65.0756
Patent No. 6503756
Patent No. 6503756
GENERAL INFORMATION:
APPLICANT: Breat P. Monia
APPLICANT: Jacqueline Wyatt
TITLE OF INVENTION: ANTISENSE MODULATION OF SYNTAXIN 4 INTERACTING PROTEIN EXPRESSION FILE REFERENCE: RTS-0127
CURRENT APPLICATION NUMBER: US/09/668,313A
CURRENT PILING DATE: 2000-09-22
NUMBER OF SEQ ID NOS: 247
SEQ ID NO 78
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: WOS-296/C

Sequence 296, Application US/09216393B

Patent No. 6559294

GENERAL INFORMATION:
APPLICANT: Griffais, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
CURRENT APPLICANION WHOBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ 1D NOS: 6849

TENAND: 0,4044

Sequence 4770, Application US/09198452A

Patent No. 6559294
GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering Prince Prince 1710-003-999
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: 1910-003-999
CURRENT APPLICATION WHORE: US/09/198,452A
NUMBER OF SEQ ID NOS: 6849
SEQ ID NOS: 6849

Sequence 14, Application US/09823634A

Sequence 14, Application US/09823634A

Patent No. 6596489

GENERAL INFORMATION:
APPLICANT: Applied Gene Technologies, Inc.
TITLE OF INVENTION: MISMATCHES USING RNASE H
CURRENT APPLICATION NUMBER: US/09/823,634A

CURRENT APPLICATION NUMBER: 2002-02-28

NUMBER OF SEQ ID NOS: 27

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 14

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                       RESULT 185
US-09-825-497A-8

i Sequence 8, Application US/09825497A

i Patent No. 6599742

i GENERAL INFORMATION:

i APPLICANT: Honkanen, Richard E.

i APPLICANT: Dean, Nicholas M.

i TILLE OF INVENTION: ANTISENSE CLICONUCLECTIDE MODUATION OF HUMAN SERINE/THREONINE PRO

i TILLE OF INVENTION: PHOSPHATASE GENE EXPRESSION

i TILLE OF INVENTION: PHOSPHATASE GENE EXPRESSION

i CURRENT FILING DATE: 2001-04-06

i VUMBER OF SEQ ID NOS: 42

i NUMBER: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 207, Application US/09112580

Fatent No. 6610539

GENERAL INFORMATION:
APPLICANT: WOUNG, Aping
APPLICANT: WOUNG, Aping
TITLE OF INVENTION: ANTIERNSE OLIGONUCLEOTIDE SEQUENCES AS INHIBITORS OF
TITLE OF INVENTION: MICRORGANISMS
TITLE OF INVENTION: MICRORGANISMS
FILE REFERENCE: 032396-016
CURRENT APPLICATION NUMBER: US/09/112,580
CURRENT PILING DATE: 1998-07-09
FARLIER PILING DATE: 1998-07-09
FARLIER PILING DATE: 1997-07-10
NUMBER OF SEQ ID NOS: 265
SOFTWARE: PatentIN Ver. 2.0
